

Online Service development roadmap

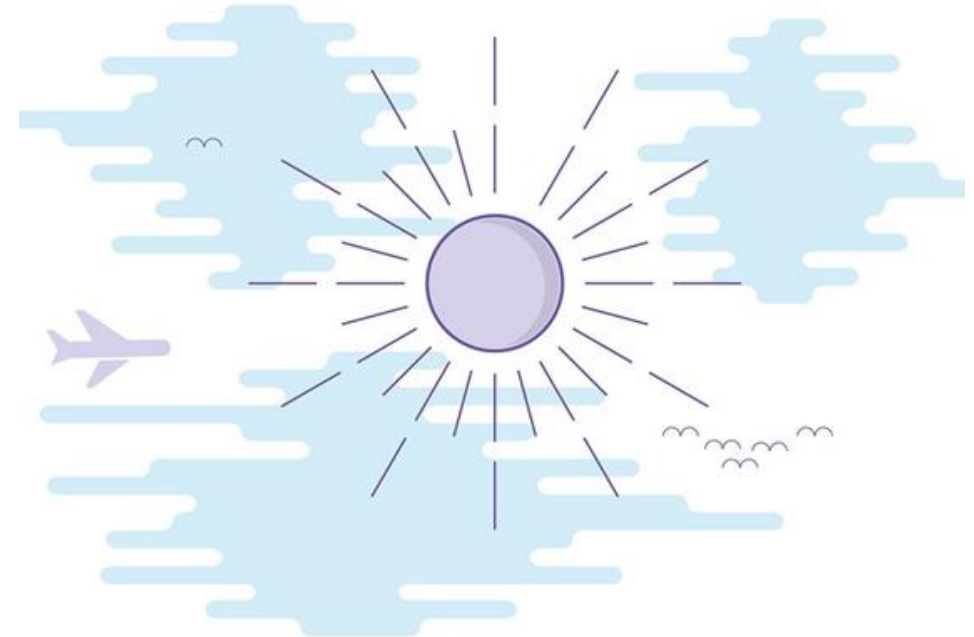

Customer Committee meeting

Tuomas Lahti | 13.10.2022

Online Service improvements

- We aim to increase the emphasis on developing the Online Service according to the needs from the market
- We strive to deliver changes and improvements which we believe would benefit as many users as possible
- We will analyze all improvement suggestions and are open about the functionalities we will implement
- We highly value all feedback and are eager to develop our services

Online Service improvements

October 2022

- BSP model technical Go-Live
 - Introduction of a new role BSP
 - Division of responsibilities between BRP and BSP
 - In the beginning all BRPs having activated or capacity reserves will have a BSP role
- 15-min ISP support
 - Support for 15-minute time resolution

Online Service improvements

Target delivery in November 2022

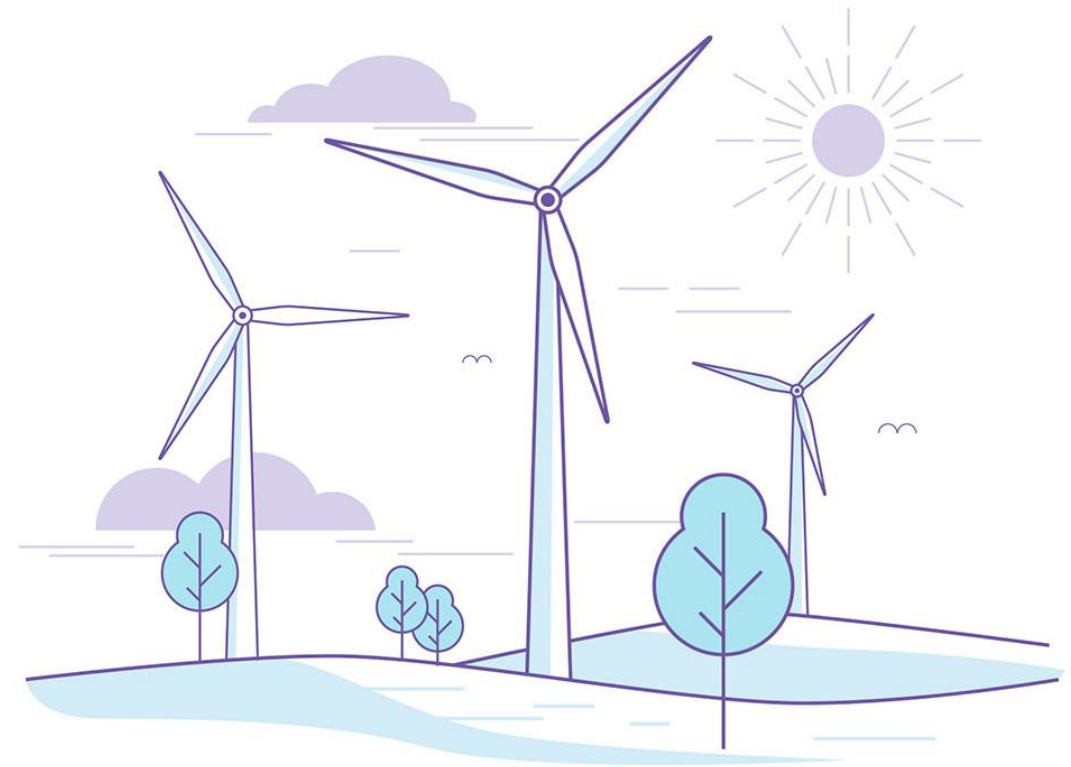

- Exchange Rates available in invoicing report and via data package
 - Two options: last invoiced week and open settlement window
- Change activity group (BRP↔DSO)
 - Usability improvement to make switching between roles more straightforward for a user without a need for new login

Online Service improvements

Target delivery in February 2023

- MGA Imbalance over limit
 - A new MGA imbalance view for Datahub and DSO users highlighting all MGAs where imbalances exceed a predefined limit
- Layout optimization
 - Usability improvement to utilize wider area of the screen proportionally

Online Service improvements

Target delivery in April 2023

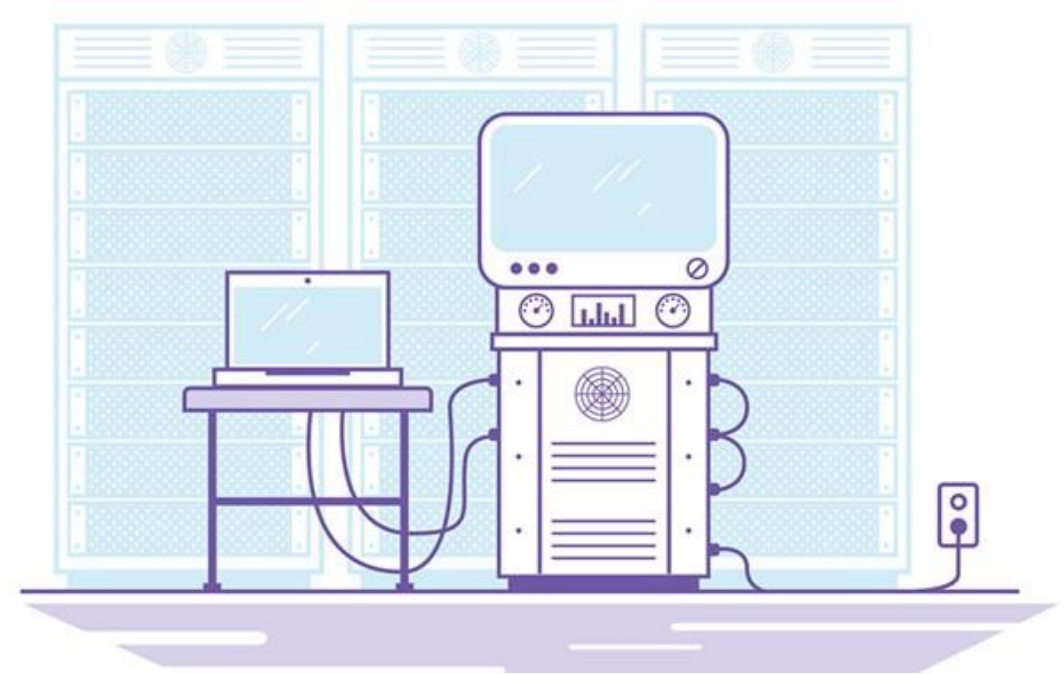

- Possibility to customize the Online Service front page with Dashboard widget improvements
 - No more empty spaces
 - Modify the order of widgets
 - Choose which widgets are displayed and hidden
 - New notifications widget available

Online Service improvements

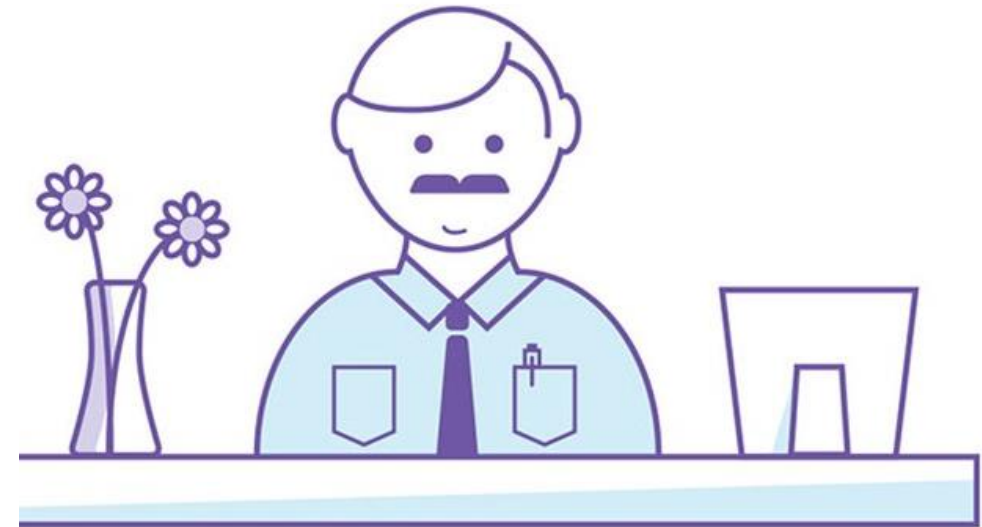

Target delivery in June 2023

- New notification overview screen including ability to manage your personal subscriptions
- Updated reporting logic for Service Providers
 - Improves especially situations where Service Provider changes
 - This change concerns mainly reporting, but also data visibility in Online Service for Service Provider

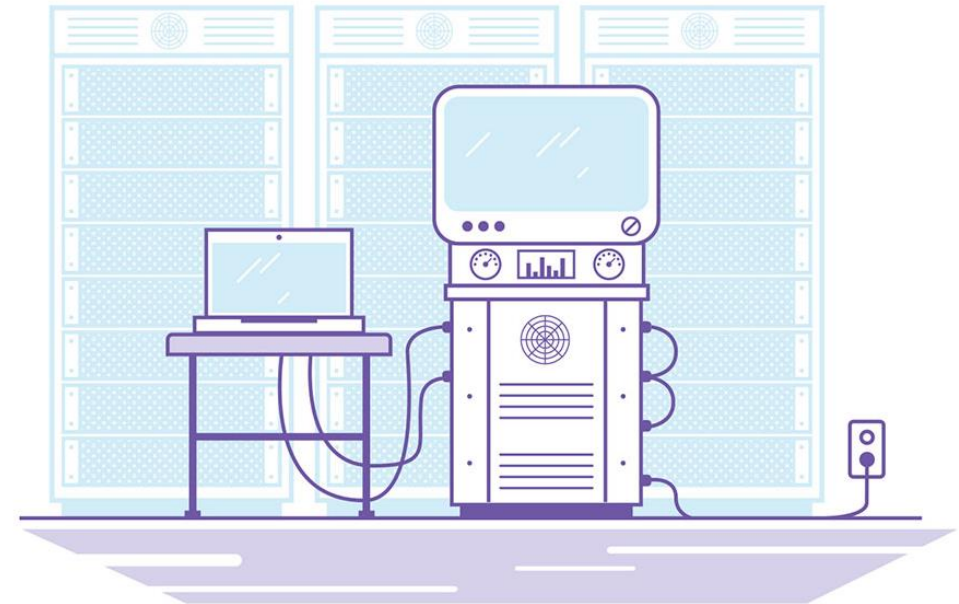

Potential improvements

- Total rows for Online Service drill-downs
 - Sums/aggregations for Imbalance drill-downs in Online Service
- Notification of a Bilateral Trade change
 - Notification when counterparty BRP of a BIT changes due to counterparty's RBR change

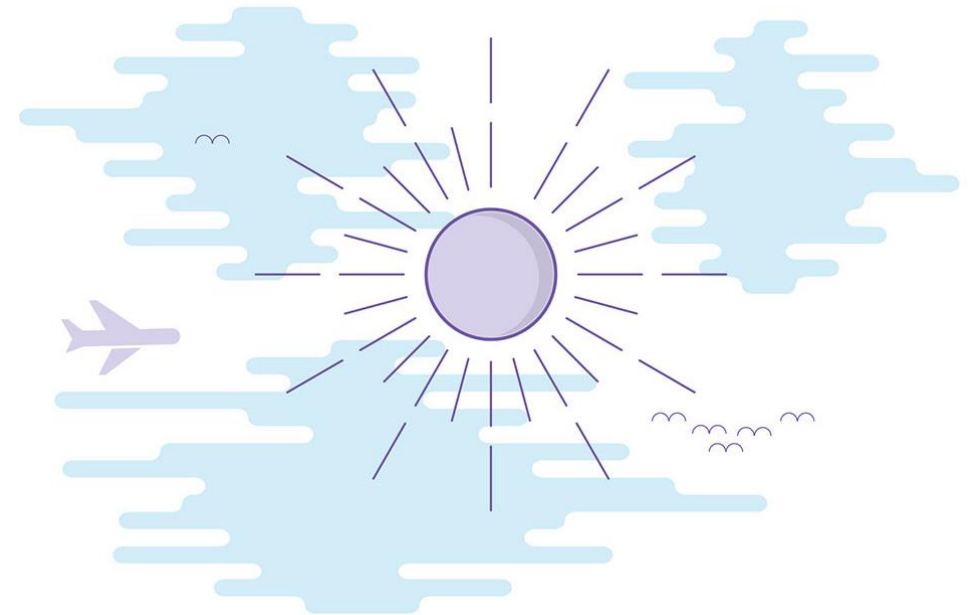

How can we add more value to our customers?

- What type of functionalities or interfaces the market hopes to see in the future?
 - What should we do?
 - What should we not do?
 - Please feel free to provide your view also to settlement@esett.com

Imbalance settlement model initiatives

- Based on customer feedback eSett will initiate analysis and discussion regarding shorter reporting cycle and more frequent invoicing cycle
 - How does the market participants see these type of changes?
 - Are they supported or do they raise concerns?
 - Please feel free to provide your view also to settlement@esett.com

WE SETTLE, TOGETHER!
